

BESTLINK COLLEGE OF THE PHILIPPINES

College of Computer Studies

1071 Brgy. Kaligayahan Quirino Highway, Novaliches, Quezon City

COURSE CODE: PRAC101

Section: BSIT - 4107

COURSE TITLE: OJT / PRACTICUM 1

TERM: 1st Semester, SY 2025-2026

PROFESSOR: MR. EMERSON GELERA

NAME OF STUDENT: DELA CRUZ, RHUARY D.

OJT NARRATIVE REPORT

- A. TOPIC: NEXTGEN IT: PREPARING FOR THE DIGITAL WORKPLACE
- B. SPEAKER: Dr. Michael Angelo Alejandro
- C. DURATION: 1:00 PM - 4:00 PM
- D. SCREENSHOT OF DUTY

E. REFLECTION

Final Requirement: NEXTGEN IT: Preparing for the Digital Workforce

The seminar titled *"NextGen IT: Preparing for the Digital Workforce"* gave me a new way of understanding what it really means to join the IT industry. At first, I thought it would just talk about different career paths and common IT jobs for graduates. But as I listened, I realized it was more about personal growth—how we can prepare ourselves to succeed in a fast-changing and competitive world.

One of the most important lessons I learned is that being part of the digital workforce is not just about having technical skills. The speaker said that companies today look for people who can adapt, communicate well, think for themselves, and work with others. This made me realize that while technical skills like coding or troubleshooting are important, what truly matters for long-term success are teamwork, responsibility, and continuous learning.

The seminar also opened my eyes to how big the role of IT is in today's society. Before, I thought IT work only involved sitting in front of computers. But now I understand that technology helps businesses make decisions and create new ideas. IT professionals are not just supporting workers anymore—they are helping lead organizations forward. This made me proud of my chosen course but also reminded me that I need to prepare seriously to become a capable professional.

One part that really stayed with me was when the speaker talked about having the right mindset. He said that successful people in IT are not only skilled but also open to learning and improving themselves. That made me reflect because sometimes I study just to finish schoolwork, not to really learn. The talk helped me realize that the habits I build now will affect the kind of professional I will become in the future.

The speaker also discussed **soft skills**, which I used to ignore since I focused more on technical work. I now understand why communication, professionalism, and emotional maturity are important. In the workplace, we will need to work with different kinds of people and face many challenges. If I want to succeed, I must learn to cooperate, communicate clearly, and stay calm and respectful in different situations.

I also liked how realistic the seminar was. It did not say that finding a job will be easy. Instead, it taught us that we will face challenges, competition, and pressure. But it also reminded us that those experiences help us grow. The future may be uncertain, but I now feel more confident and prepared to face it.

After thinking about everything I learned, I realized that preparation is not just about learning technical skills. It also means becoming more responsible, disciplined, and aware of how I work with others. I should start acting like a professional even while I'm still a student—by managing my time well, taking initiative, and stepping out of my comfort zone.

In the end, this seminar helped me know myself better and gave me a clearer idea of what I need to improve before I enter the real world. I'm thankful that I attended because it didn't just give information—it inspired me to take my future seriously and start preparing now. I left the seminar feeling more focused, motivated, and ready to become part of the digital workforce.
